Expression Document of Consignment

Feature: Implement Consignment menu in TechDiser

Sub-Goals: Create demand for consignment planning, Planning and Demands Confirm, Container Booking, Consignment Create, Consignment Order Placement

Content:

- Demand Create and Send for Planning → Chapter 1
- Planning → Chapter 2
- Container Booking → Chapter 3
- Consignment Create → Chapter 4
- Consignment Order Placement → Chapter 5

Technology and Tools: AngularJS, Javascript, HTML, CSS

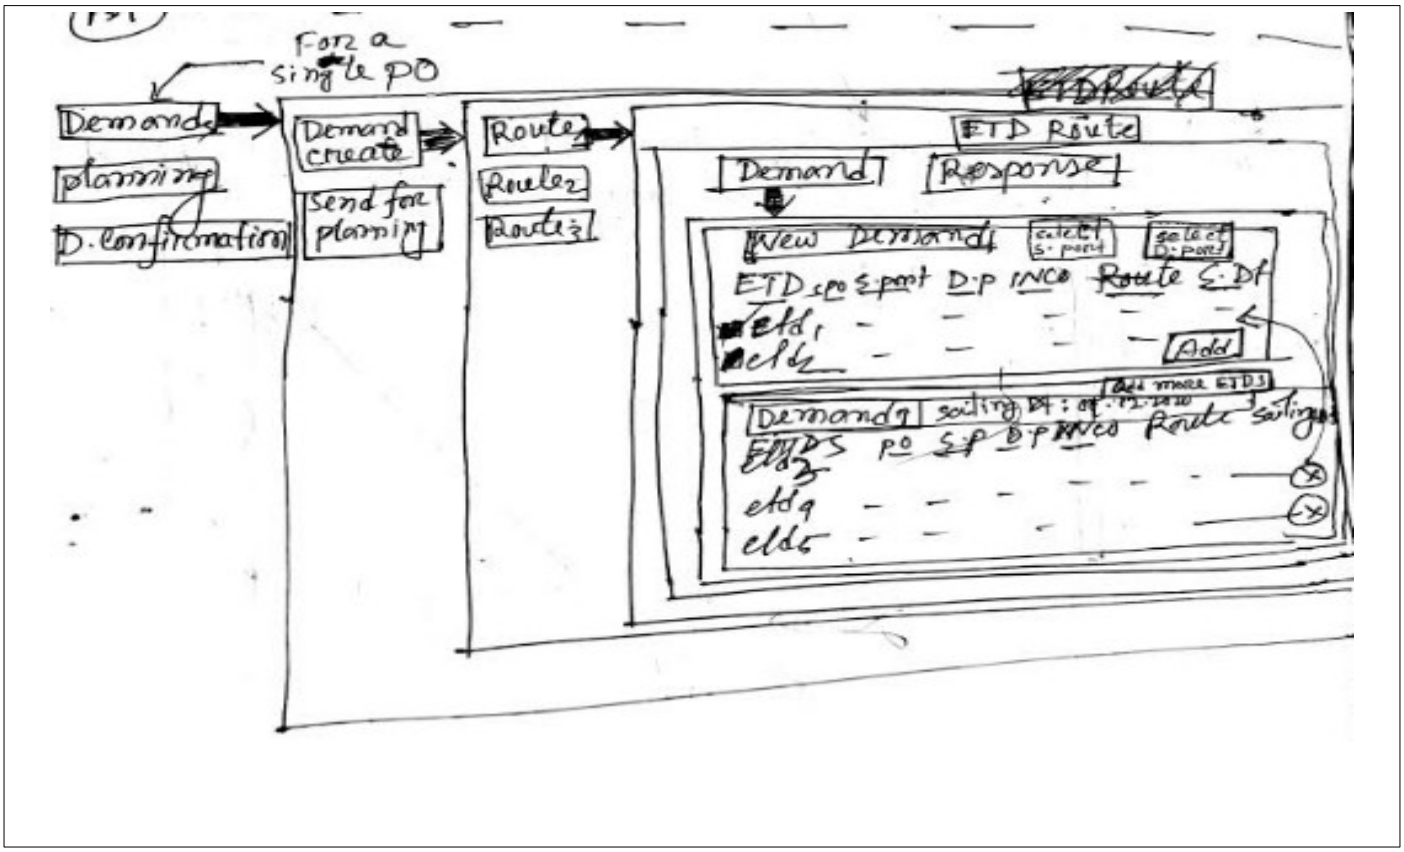
Chapter 1 : Demand Create

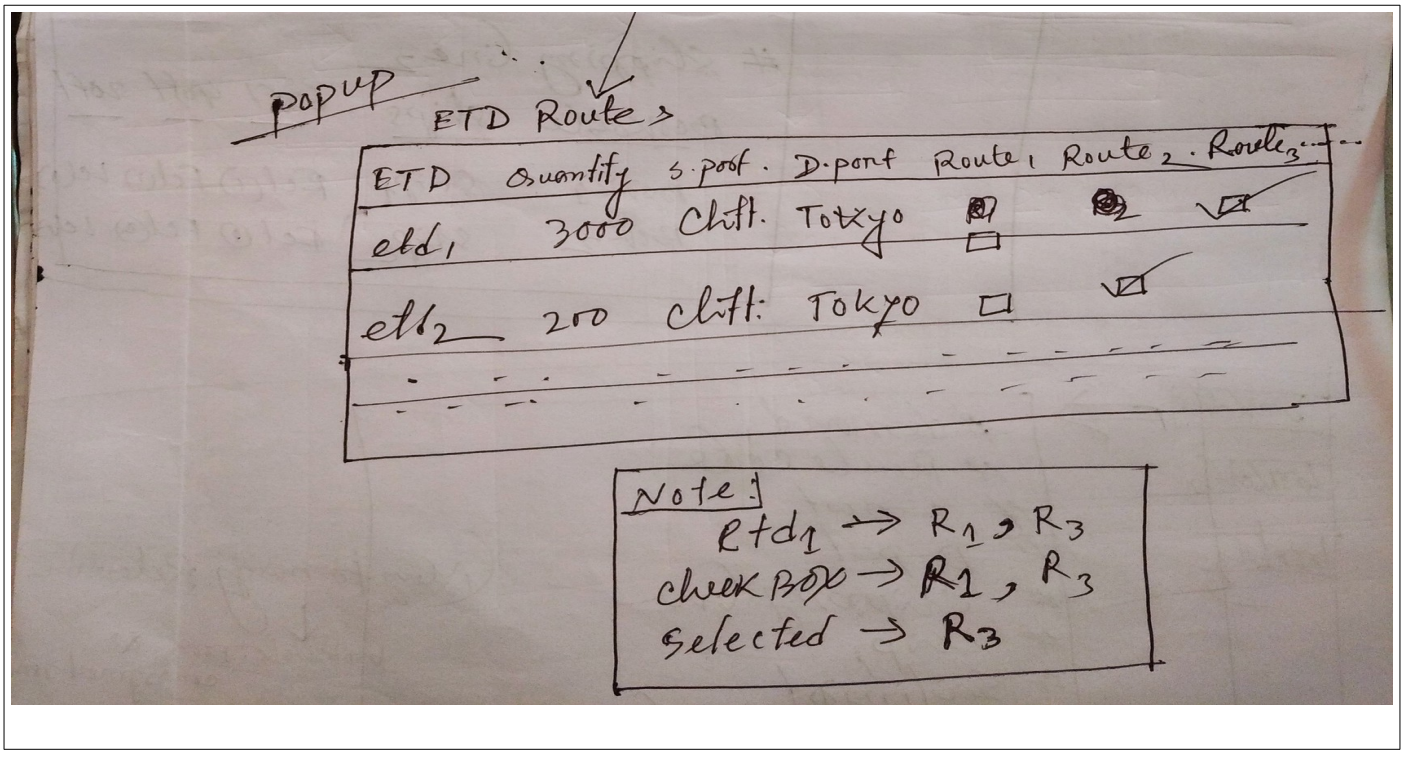
1.1 Steps and Goals: (Demand Create)

SN	Steps	Sub-Goals	Section
1.	1. Create demand 2. Send for planning	Create demand for consignment planning	Section 1

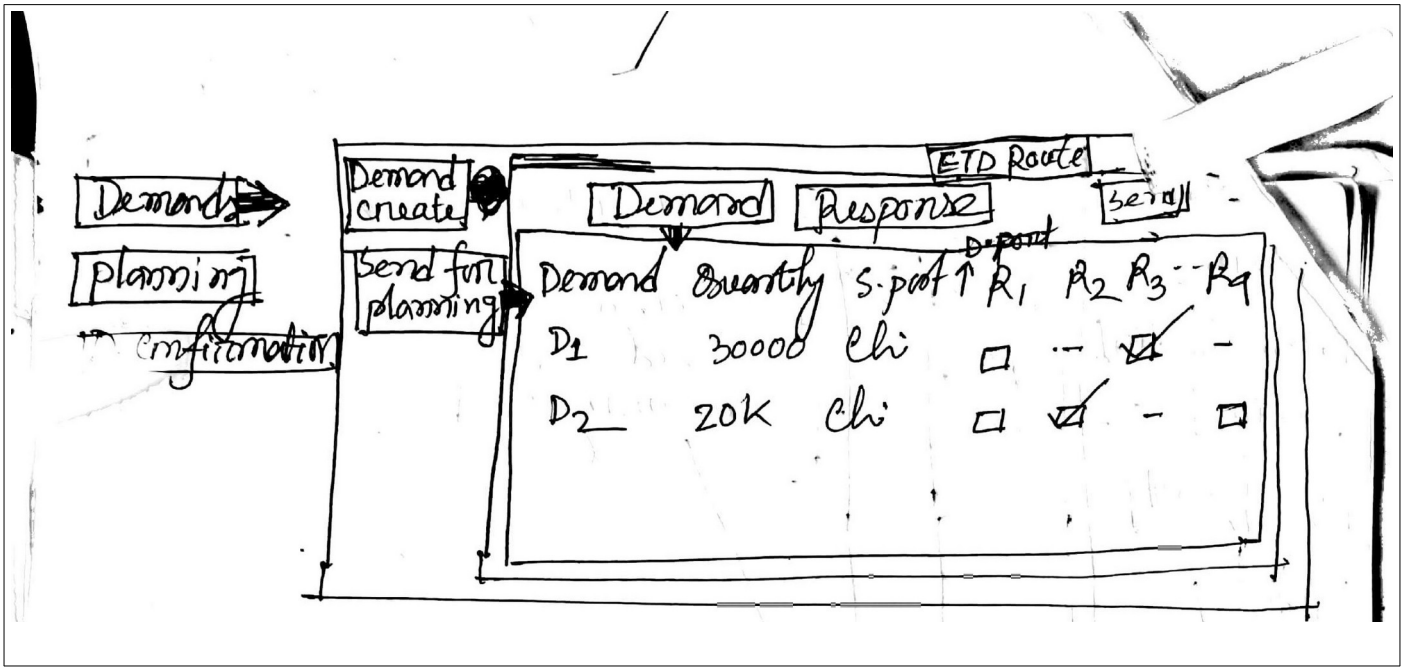
1.2 UI

1.2.1 Demand Create





1.2.2 Send for Planning



1.3 UI Work Flow

1.3.1 Create Demand Tasks

- List of demands
- Adding more ETDs into demands
- Add new demand

1.3.2 Send for Planning Tasks

- List of demands
- Demands vs Routes matrix view
- Send for planning

1.4 UI Routing

- Demands (Menu) → Create Demand (Sub menu)→ Route info menu→ Demands (Tab)
- Demands (Menu) → Send for Planning (Sub menu)→ Demands (Tab)

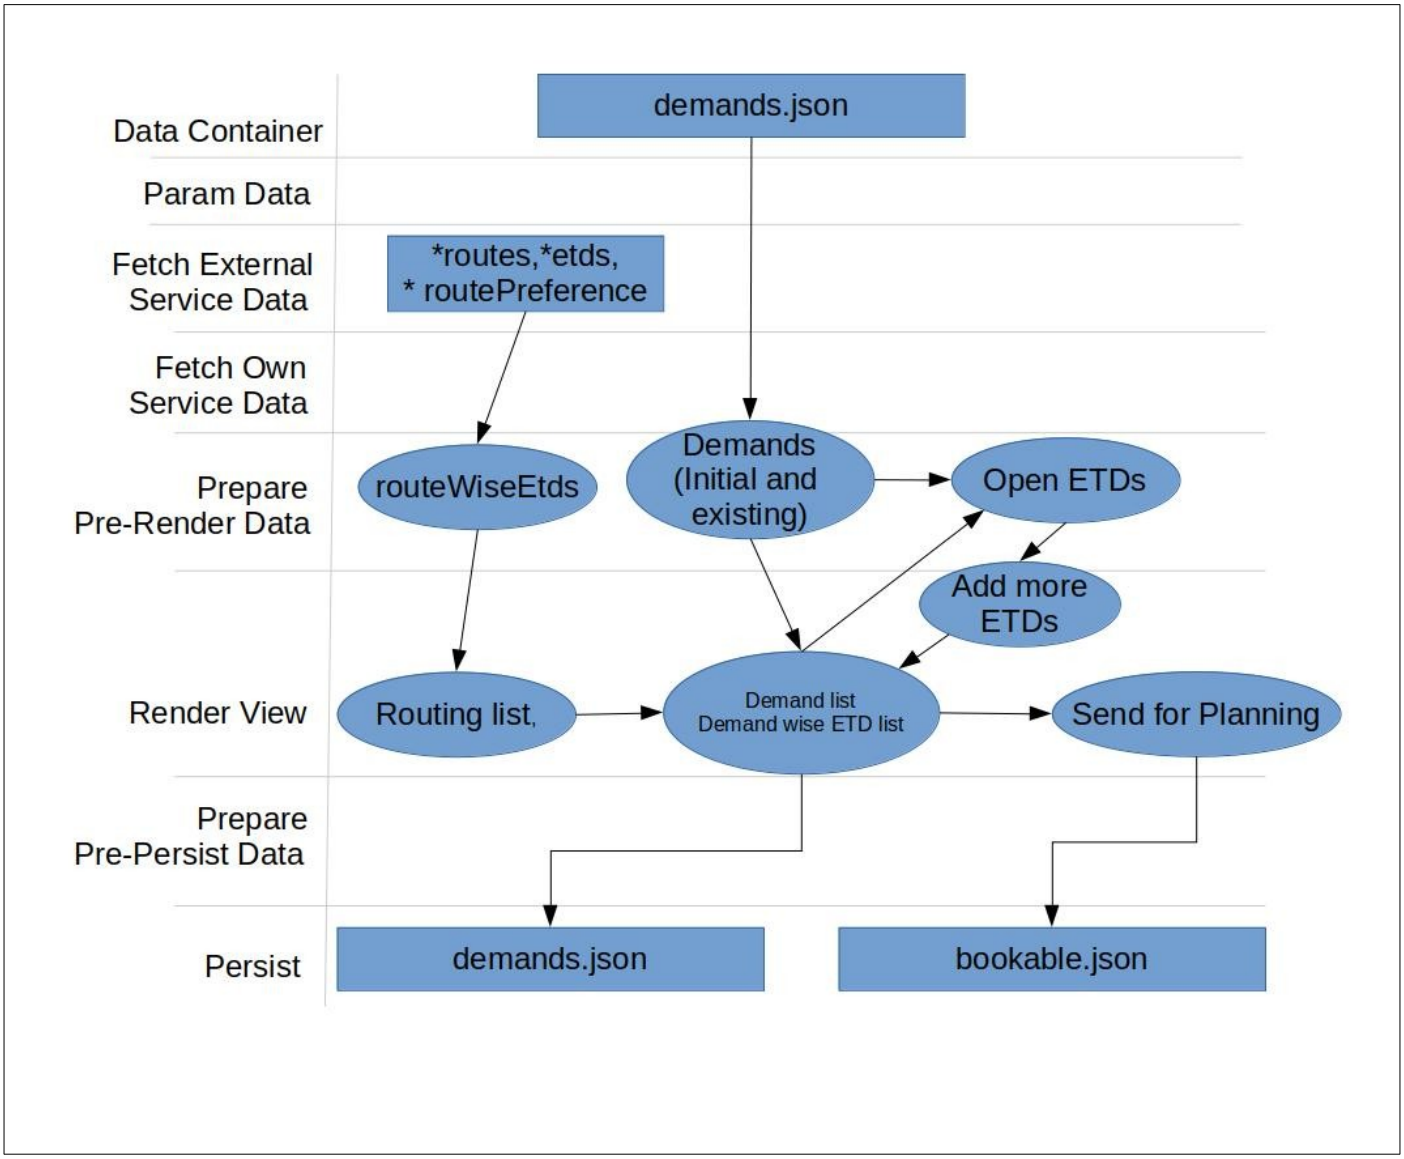
1.5 Expression Table

SN	Title	Content
1.	External Dependencies	*routes,*list of etds, *route preference
2.	Business Constraints	1. Demand will be created for a route and route itself has weekdays 2. Sailing date of demand : Selected ETDs → latest sailing date → & selected routing → nearest week deport date 3. Add “Add more etds” on the right of demand header so that user can add more etds to a particular demand. Filter etd options based on demand’s s.port,d.port and shipment mode. It’s a popup. 4. While creating new demand first take s.port,d.port and shipment mode then show the etds matching the provided s.port,d.port and shipment mode.
3.	Technical Constraints	

4.	Functions	A) Prepare Routes and its ETDs 1. Fetch PO ETDs 2. Fetch routes Prepared Route ETDs based on etd's sail, destination ports and shipment mode match to the route's sail,destination,transition ports and shipment mode 3. Show the routes with ETDs in route info menu 4. Consider only the ETDs of the selected route in creating demands B) Initially create demands based on etd sailing port,etd d.port, etd sailing date and shipment mode(if multiple matches fund , put the etd in the route found from route preference otherwise place it as open etd). So while creating demands group it by route, etd s.port, etd d.port, etd sailing date and shipment mode.
5.	Findings	1. Route itself has weekdays 2. Finding sailing date seems not okay
6.	Unexplored Issue	
7.	Deliverable	1. Prepare demands for consignment planning
8.	Notes	Landed with PO Operator: merchandizer Route card : add→ s.port,d.port,transition port codes, ETD list : add columns (quantity,sailing date) Add checkbox to new demand section, New demand will be created with the selected ETDs, initially all ETDs will be unselected. Rename booking to bookable

9.	Questions	

1.6 Operation Flow



1.7 Data Structure

1.7.1 Mock Data (* Route ,* ETDs and *PreferedRouteMock)

2.3 UI Work Flow

2.3.1 Calendar view Tasks (Planning → Landing Page-Calendar)

- Total demands
- Planned
- Remained

2.3.2 View demands with response Tasks (Planning → demand tab)

1. List of demands(with PO & route code)
2. Demand response details

2.3.3 View ship wise bookables Tasks (Planning → shipping lines tab)

1. List of routes
2. List of shipping lines
3. Demand positioning into ship(popup)
4. switch to container tab for this shipping line

2.3.4 Assigning bookable into ship Task (Planning → Demand Pos. popup))

1. List of bookable(open demands)
2. Bookable (open bookables) vs ship matrix
3. list of ships for a specific shipping line
4. Assigning bookable into ship
5. Switch to split demand tab

2.3.5 Splitting demand Tasks (Planning → Split demands popup)

1. List of bookable
2. Positioning ETD into bookable

2.3.6 Viewing all demand (Shipping line wise) Task (Planning → All demands popup)

1. List of shipping lines
2. List of bookable
3. List of ships for a specific shipping line

2.3.7 Ship and container wise FCL and LCL counting Task (Planning → Containers)

1. Select route(popup)
2. Select shipping line(drop down)

2.3.8 Bookable positioning into FCL (max level packing wise) Tasks (Planning → DemandPos.(FCL))

1. Select route(popup)
2. Select shipping line(drop down)

3. List of ships for a specific shipping line
4. List of bookable for a specific ship

2.3.9 Bookable positioning into LCL (max level packing wise) Tasks (Demand → Confirmation)

1. List of bookable
2. Confirm demand

2.4 UI Routing

2.4.1 Planning → Landing Page-Calendar

- Planning → Calender

2.4.2 Planning → demand tab

- Planning → List of tabs(horizontally) → Demands(tab)

2.4.3 Planning → shipping lines tab

- Planning → List of tabs(horizontally) → ShippingLines(tab) → List of routes → ShippingLines

2.4.4 Planning → Demand Pos. popup

- Planning → List of tabs(horizontally) → ShippingLines(tab) → List of routes → ShippingLines
- Demand positioning(popup) → List of tabs → Demands tab(Selected)

2.4.5 Planning → Split demands popup

- Planning → List of tabs(horizontally) → ShippingLines(tab) → List of routes → ShippingLines
- Demand positioning(popup) → List of tabs(horizontally) → Split Demand → List of bookable

2.4.6 Planning → All demands popup

- Planning → List of tabs(horizontally) → ShippingLines(tab) → List of routes → ShippingLines
- Demand positioning(popup) → List of tabs(horizontally) → All Demand → List of shipping lines

2.4.7 Planning → Containers

- Planning → List of tabs(horizontally) → Containers(tab) → Select routes → Select ShippingLines

2.4.8 Planning → DemandPos.(FCL)

- lanning → List of tabs(horizontally) → Demand Pos.(tab) → FCL(tab) → Select routes → Select ShippingLines → List of ships

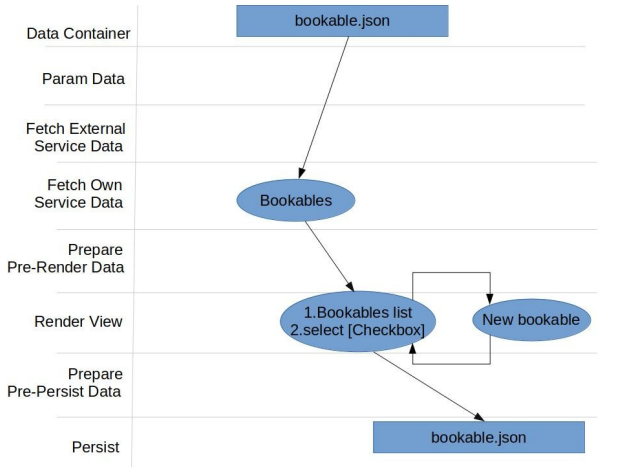
2.5 Expression Table

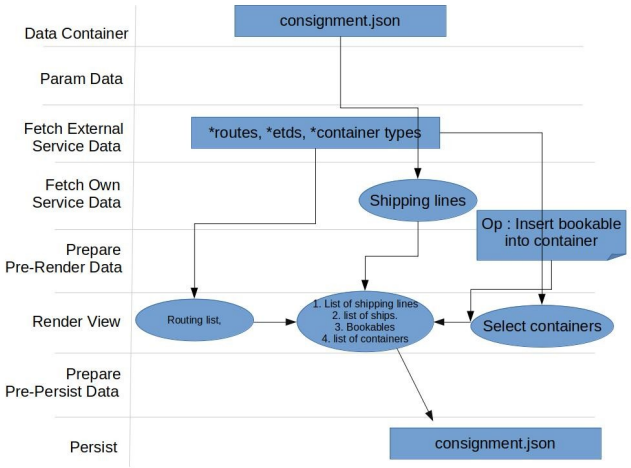
SN	Title		Content
1.	External Dependencies		Bookables
2.	Business Constraints		1. Landing page is a calendar . Bookables will be filtered based on calendar date (matching with sailing date). 2. Bookable will be read for multiple PO 3. In demand pos. tab : List of open bookable those are not positioned into ship yet
3.	Technical Constraints	Planning(landing page)	demand will be read for all PO and all routes(demand tab)
		demand(tab)	
		ShippingLine → Demand Pos.(pop up)	List of bookable (Open) that means those demands which haven’t positioned yet into ship.

		ShippingLine → Split Demand (pop up)	Q. when split bookable will be updated ? Q. what is the policy of undoing split?
		Planning → Container (tab)	All space will be measured into feet (Container & Packet)
		FCL (tab)	
		LCL (tab)	
4.	Functions	Planning(landing page)	
		demand(tab)	
		ShippingLine → Demand Pos.(pop up)	

		ShippingLine → Split Demand (pop up)	
		Planning → Container (tab)	
		FCL (tab)	
		LCL (tab)	
5.	Findings		
6.	Unexplored Issue		
7.	Deliverable		Prepare demands for planning

2.6 Operation Flow

Demand list view	Positioning bookable to ship
	Packet positioning into FCL	**Packet positioning into LCL**
	




2.7 Data Structure

2.7.1 Mock Data

```
